COMPLETE SYSTEM FUNCTIONALITY GUIDE

Everything Your New Pharmacy & Clinic Software Does for You

A Simple, Step-by-Step Feature Handbook Prepared for Prakash Dulal and Staff

Welcome to Your Custom-Built Pharmacy & Clinic System!

This software was built specifically for **Prakash Pharmacy** in Hetauda, Nepal. It simplifies daily counter sales, automatically monitors drug expiries, tracks customer credit (*Udharo*), manages medicine distributors, and seamlessly connects doctor consultations directly to your dispensing counter.

SYSTEM PROFILE & STORE DETAILS

Pharmacy Name:	Prakash Pharmacy	**Proprietor / Lead:**	Prakash Dulal (NPC-1425)
Location:	Hetauda-5, Makwanpur, Nepal	**Phone Contact:**	+977-057-521480
PAN Number:	123798907	**DDA License:**	3780516073935
Tax Status:	13% VAT Registered & Exempt	**Currency:**	Nepalese Rupee (NPR)

9 Quick Step-by-Step Daily Workflow Guide **13**

10 Formal Handover Acknowledgement **14**

HOW TO USE THIS HANDBOOK:
This guide explains **every single feature** we created for your pharmacy in simple, everyday language. There is no technical jargon or complex code explanations. Keep this handbook at your front billing counter and doctor consultation room as a quick reference for your staff.

1 Fast Point-of-Sale (POS) Billing Terminal

The Point-of-Sale (POS) terminal is the heart of your pharmacy. It is built to make customer checkouts fast, accurate, and completely stress-free during rush hours.

1. Lightning-Fast Drug Search (Brand, Generic & Barcode)

Instant Search

You can find any medicine in less than a second simply by typing the first few letters of the brand name (e.g., *Amox...*), the generic molecule name (e.g., *Paracetamol*), or scanning its barcode with a handheld scanner.

2. Automatic Expiry Prioritization (FEFO)

Smart Shelf Clearing

When multiple batches of the same medicine are in stock, the system automatically selects the batch expiring earliest (*First-Expired, First-Out*). This ensures your oldest stock is dispensed first, preventing medicines from expiring unnoticed on your shelves. Cashiers can also click to pick a different batch if a customer specifically requests it.

3. Sell Full Packs or Loose Tablets with Instant Unit Math

Dual Packaging

You never have to manually calculate price-per-tablet using a pocket calculator:

- When a customer asks for 1 strip or box, enter the pack quantity.
- When a customer asks for loose tablets (e.g., 3 tablets of an antibiotic), enter the tablet quantity.
- The system automatically divides the MRP by the pack size (*Units Per Pack*) to give the exact fair price and deducts the correct loose tablets from your inventory.

4. Multiple Flexible Payment Methods

All Payment Tenders

Customers can pay using whatever method they prefer:

- **Cash:** Enter cash tendered; the system displays the exact change to return to the customer.
- **Fonepay / QR Code:** Select QR Code to record mobile digital payments.
- **Card:** Record debit or credit card payments.
- **Customer Credit (Udharo):** Bill directly to the customer's digital Khata account.
- **Split Payments:** Customers can pay part in cash and part in Fonepay (e.g., Rs. 500 Cash + Rs. 350 QR).

5. Instant Line-Item or Bill-Level Discounts

Easy Discounts

Apply a flat discount (e.g., Rs. 20 off) or a percentage discount (e.g., 10% off) to individual medicines or the entire bill with a single keystroke.

6. Professional Nepal Tax Receipts (Thermal 80mm or Full A4/A5)

Print Ready

Print professional receipts immediately upon billing. Formatted with your pharmacy name, address, PAN number (123798907), DDA registration, sequential invoice number, and customized thank-you note. Works seamlessly with standard 80mm thermal receipt printers and standard desktop printers.

✓ **HOW THIS HELPS YOUR PHARMACY:**

Prevents long customer queues, stops pricing mistakes on loose tablets, ensures your oldest batches sell first, and creates professional tax receipts in seconds.

2 Complete Inventory, Batch & Expiry Control

Never lose track of your stock or let medicines expire on your shelves. The inventory system keeps an accurate, real-time count of every single pack and loose tablet in your store.

1. Real-Time Pack & Loose Unit Tracking

Accurate Stock

The inventory dashboard shows exactly what you have in stock at any moment:

- **Full Packs:** Number of unopened boxes or strips.
- **Loose Units:** Number of loose tablets, capsules, or ampoules currently in opened packs.
- **Automatic Box Opening:** When you sell loose tablets, the system automatically breaks open a full pack and moves the remaining units into your loose unit count.

2. Color-Coded Expiry Visualizer

Zero Waste

Your inventory is color-coded so you can spot near-expiry medicines from across the room:

- **Expired (Red):** Date has passed. Selling is blocked automatically to protect patients and keep your pharmacy safe.
- **Expiring in $\leq$ 30 Days (Orange):** Urgent alert! Dispense first or return to your distributor for replacement/credit.
- **Expiring in $\leq$ 90 Days (Yellow):** Early warning to prioritize these medicines.
- **Safe Stock (Green):** Healthy stock with plenty of shelf life remaining.

3. DDA Regulatory Flags (Prescription Required & Narcotic Drugs)

Government Compliance

The system clearly marks:

- **Prescription / Rx Required:** Reminds staff to check and keep a doctor's prescription before dispensing.
- **Narcotic / Psychotropic Drugs:** Flags controlled medicines to satisfy Department of Drug Administration (DDA) inspection rules.

4. Rack and Shelf Location Finder

Instant Shelf Finding

Every medicine can be tagged with its physical location in your shop (e.g., *Rack A-2*, *Fridge*, *Emergency Counter*, *Ointment Shelf 1*). New staff can locate any medicine immediately without having to ask where it is kept.

5. Distributor Bonus Goods Tracking (Free / Bonus Packs)

Free Scheme Goods

When a distributor gives you free medicines (such as 10+1 free schemes), you can record the **Free / Bonus Packs** separately. This ensures your stock count is 100% accurate without messing up your purchase cost valuation.

6. Physical Stock Audit Worksheet

Monthly Shelf Count

A built-in digital worksheet lets you walk down your aisles, count shelf stock, and enter actual counts. The system flags any discrepancy (breakages, damaged bottles, shrinkage) and logs the adjustment with a reason for permanent record-keeping.

✓ HOW THIS HELPS YOUR PHARMACY:

Cuts financial losses from expired drugs, ensures strict DDA regulatory compliance, helps new staff find medicines immediately, and keeps shelf counts 100% accurate.

3 Customer Credit (*Udharo* / *Khata*) Ledger

In community pharmacies, trusted regular customers often buy medicines on credit (*Udharo*). Instead of writing in paper copy notebooks where pages tear and calculations get lost, your software provides a modern, automated **Digital Khata**.

1. Complete Customer Khata Directory

Digital Ledger

Create customer profiles with their name, mobile phone number, home address, and a customized maximum credit limit (e.g., Rs. 5,000 max credit).

2. Automatic Debt Posting at POS Counter

Zero Double-Entry

When a regular customer purchases medicines on credit, the cashier simply selects **Payment Method: Credit** and picks the customer's name. The bill completes immediately, and the total amount is automatically added to that customer's digital ledger debt. You never have to manually write in a paper notebook again.

3. Fast Payment Settlements (Full or Partial)

Simple Balance Clearing

When the customer comes to clear their balance:

- Open the extbfCustomer Credit view and find their name.
- See their exact total outstanding balance.
- Click extbfSettle Payment, enter the amount paid (full or partial payment), choose Cash or QR Code, and save.
- Their balance updates instantly, and an official payment receipt is generated.

4. Clear Customer Account Statements

Printable Account History

Print or show an itemized ledger statement showing every bill taken on credit, every payment made, dates, bill numbers, and the running balance. This eliminates customer disputes over bill amounts.

✓ HOW THIS HELPS YOUR PHARMACY:

Eliminates lost credit notebooks, prevents customers from exceeding their credit limits, avoids awkward calculation arguments, and speeds up debt collection.

4 Hassle-Free Sales Returns & Credit Notes

Customers occasionally return unopened medicines (e.g., when a patient's prescription is changed by their doctor). Your software handles this cleanly and accurately.

1. Quick Invoice-Linked or Ad-Hoc Returns

Simple Return Entry

Search the customer's original bill number to view the exact items they purchased and return specific quantities, or process an ad-hoc counter return if they brought the medicine without an invoice.

2. Automatic Inventory Restocking

Accurate Stock Return

Returned medicines are automatically restocked back into your live inventory with their original batch number and pack/unit counts.

3. Proper Credit (*Udharo*) Reversal

No Cash Drawer Errors

If a customer returns medicine that was purchased on credit and has not yet been paid for, the system automatically **reduces their outstanding debt in their Khata** instead of taking physical cash out of your cash drawer.

4. Official Credit Notes & 13% VAT Adjustment

Tax Compliant

Generates a sequentially numbered Credit Note and automatically reverses the 13% VAT collected on taxable items, keeping your tax records in perfect order.

5 Stockist & Inward Supply Chain Management

Keep all your medicine distributor relationships, inward purchase bills, scheme bonuses, and supplier payments organized in one place.

1. Wholesaler Directory with PAN & Contacts

Distributor Master

Save distributor company names, contact numbers, sales representative details, PAN numbers, and agreed credit terms (e.g., 30-day payment cycle).

2. Fast Inward Purchase Bill Entry

Stock Inwarding

When a distributor delivers a shipment of medicines:

- Select the distributor and enter their invoice number and date.
- Add each delivered medicine with its Batch Number, Expiry Date, Units Per Pack, Purchase Cost Price, and MRP.
- As soon as you save, all stock is immediately added to your shelves and available for billing at the counter.

3. Free Bonus Scheme Tracking (e.g., 10+1 / 10+2)

Scheme Accuracy

Enter free bonus goods received on promotional schemes. The system records the free stock into inventory without artificially distorting your purchase cost price per pack.

4. Distributor Returns (Debit Notes)

Returning to Supplier

If a shipment arrives with damaged bottles, broken strips, or short-expiry stock:

- Create a **Distributor Return (Debit Note)**.
- The medicines are deducted from your stock, and your account balance with that distributor is automatically reduced.

✓ HOW THIS HELPS YOUR PHARMACY:

Maintains complete proof of purchases, prevents overpaying distributors, tracks supplier credit balances, and manages bonus scheme stock accurately.

6 Integrated Outpatient Clinic & Doctor EMR

If you have doctors consulting at your pharmacy polyclinic, this feature connects the doctor's consultation room directly to your medicine dispensing counter.

1. Doctor Profiles, Consultation Fees & OPD Queue

Doctor Roster

Set up visiting doctors with their NMC registration numbers, specialties, consultation rooms, and fees. Staff can add arriving patients directly to the doctor's live waiting queue.

2. Digital Patient Medical Records

Patient History

Keep track of patient names, age, phone numbers, known drug allergies, and past medical conditions for personalized community healthcare.

3. Vitals Check-In (BP, Pulse, Temp, SpO2, Weight)

Vital Signs

Pharmacy staff or clinic nurses can record patient vitals during check-in: Blood Pressure (BP), Pulse Rate, Body Temperature, Respiratory Rate, Blood Oxygen (SpO2), and Body Weight.

4. Digital Doctor Prescriptions with 1-Click Pharmacy Handoff

No Duplicate Typing

The doctor selects medicines, dosages (e.g., *1 tablet twice daily*), and duration (e.g., *5 days*). When the doctor clicks extbfSave Prescription:

The prescribed medicines immediately appear on the pharmacy front counter!

The cashier simply clicks the prescription, and the medicines are instantly loaded into the POS billing cart with the correct batches. **No reading difficult doctor handwriting, and zero retyping!**

7 Financial Reports & Real-Time Profit Analytics

Understand exactly how your business is performing every single day with accurate, real-time reports.

1. Real-Time Gross Profit in Rupees (NPR)

Know Your Earnings

See your exact daily, weekly, and monthly Gross Profit calculated automatically as:

$$\text{Net Profit} = \text{Total Sales Revenue} - \text{Purchase Cost of Sold Medicines} + \text{Cost of Restocked Returns}$$

You can see exactly how much profit you made today after accounting for all discounts, tender modes, and customer returns.

2. End-of-Day Cash Drawer Reconciliation

Daily Cash Balancing

At closing time, print the extbfDaily Summary. It shows exact breakdowns of:

- Physical Cash collected at the counter drawer.
- Fonepay / QR Code digital payments received.
- Card payments processed.
- New Credit (*Udharo*) extended to customers.
- Credit payments collected.

Match the physical cash in your drawer against the report to ensure zero cashier discrepancies before locking up for the night.

3. IRD-Compliant 13% VAT Sales Register

Tax Accountant Ready

Provides an official sales register broken down into:

- Taxable Sales (medicines with 13% VAT).
- Non-Taxable / Exempt Sales (VAT-free medicines).
- Total 13% VAT collected.

Hand this report directly to your tax auditor or accountant at the end of every month.

4. Total Inventory Asset Valuation at Cost & MRP

Know Your Worth

See the total rupee value of all medicines sitting on your shelves, calculated at both your **Purchase Cost Price** and your **Maximum Retail Price (MRP)**.

5. Fast-Moving vs. Slow-Moving Medicine Reports

Smart Stock Ordering

Identify your top 20 best-selling drugs and see which dormant medicines have not sold in 60 days. This prevents dead capital from sitting locked up on your shelves.

✓ HOW THIS HELPS YOUR PHARMACY:

Gives you complete clarity over daily profits, eliminates cash drawer shortages, keeps tax filing stress-free, and ensures you invest only in fast-selling medicines.

8 Bulk Excel Tools, Security & Store Settings

8.1 1. Bulk Excel Import & Stock Export

- **Excel Template Download:** Click **Excel Template** in the Inventory view to download the template (`Import_Template.x` The sheet comes pre-formatted with example rows and includes dedicated columns for **Free / Bonus (Packs)** and **Prescription / Rx Required (YES/NO)**.
- **1-Click Bulk Upload:** Fill in your stock from a distributor price list or warehouse spreadsheet and upload hundreds of medicines into the system in a few seconds.
- **Full Stock Backup (.xlsx):** Click **Export Stock** at any time to download your complete live inventory into an Excel spreadsheet for offline records or distributor ordering.

8.2 2. Multi-User Staff Roles & Security

Keep your sensitive financial data private while giving your team the tools they need:

- **Administrator (Owner / In-Charge):** Full control over profit margins, purchase costs, store settings, staff accounts, and financial reports.
- **Cashier (Front Counter):** Can search drugs, process bills, print receipts, and accept credit payments. **Cashiers cannot view your distributor purchase costs, view total profit margins, or alter store tax settings.**
- **Pharmacist:** Manages drug catalog, batch updates, inward distributor shipments, and dispensing.
- **Doctor:** Dedicated access to the outpatient clinic queue, patient vitals, and digital prescription creation.

8.3 3. Store Profile & Tax Settings

All your business information is pre-configured and fully customizable under **Settings**:

- Pharmacy Name: **Prakash Pharmacy**
- Address: **Hetauda-5, Sanopokhara, Makwanpur, Nepal**
- PAN Number: **123798907** | DDA License: **3780516073935**
- Pharmacist In-Charge: **Prakash Dulal (NPC-1425)**
- Customizable Receipt Footer: *Thank you for choosing Prakash Pharmacy! Medicines cannot be refunded after 7 days without bill.*
- Sequential Starting Invoice Number control.

9 Quick Step-by-Step Daily Workflow Guide

Here is a quick operational reference for your staff for standard daily tasks:

Workflow 1: How to Bill a Customer at Counter

1. Click extbfPOS Billing in the left menu.
2. Type the medicine name or scan the barcode → click on the medicine.
3. Enter the quantity (packs or loose tablets) → click Add to Cart.
4. If giving a discount, enter the flat amount or percentage.
5. Select payment mode: **Cash**, **Fonepay / QR**, **Card**, or **Credit**.
6. Click **Complete Sale & Print** → receipt prints automatically.

Workflow 2: How to Sell Medicine on Customer Credit (Udharo)

1. At POS Billing, add medicines to the cart.
2. Under Customer, select an existing customer or click extbfAdd New Customer.
3. Select Payment Method: **Credit**.
4. Click extbfComplete Sale → bill prints, and debt is automatically posted to their Khata.

Workflow 3: How to Settle a Customer Credit Payment

1. Click extbfCustomer Credit in the left menu.
2. Search customer by name or phone number → see their current balance.
3. Click extbfSettle Payment → enter amount paid (Cash or QR) → save.
4. Balance updates instantly, and a payment receipt is generated.

Workflow 4: How to Handle a Doctor Clinic Patient

1. Arriving patient: Click extbfClinic → click extbfRegister Patient → enter name, age, and phone.
2. Check vitals (BP, Pulse, Temp, Weight) → assign patient to Doctor's Queue.
3. Doctor opens patient, writes diagnosis, selects prescribed medicines, and clicks **Save**.
4. Front counter cashier opens POS → clicks **Load Clinic Prescription** → bills customer with zero typing.

Workflow 5: End-of-Day Cash Balancing Routine

1. At closing time, open extbfReports → extbfDaily Summary.
2. Read the **Total Cash Collected (NPR)**.
3. Count the physical cash in your drawer → ensure it matches the report.
4. Log out of the counter terminal.

10 Formal Handover Acknowledgement

The Prakash Pharmacy Management System (PMS) has been completely built, customized, and verified to meet all daily operational and regulatory requirements of **Prakash Pharmacy**.

Ready for Live Pharmacy Operations!

All features detailed in this handbook are fully active and available. We are confident this system will bring speed, accuracy, profit visibility, and peace of mind to your daily pharmacy management.
